

Bolivian Journal of Chemistry

Our Vision and Mission:

Vision The Revista Boliviana de Química RBQ, (known also as *Bolivian Journal of Chemistry*, BJC) is an international journal with a bimonthly edition with the aim of covering all branches of chemistry and related disciplines like biochemistry, chemical engineering, chemical education, etc. BJC is sustained by the Department of Chemical Sciences of Major San Andres University at La Paz. It is currently indexed in Scielo, Scribd, Google Scholar, facebook and Redalyc. The articles are published in Spanish or English.

Mission BJC has the mission to publish original papers (experimental) about new chemical discoveries, and reviews and theoretical articles concerning new facets of already known subjects so far unpublished and uncommitted to other journal.

Publication BJC is an open access journal; it charges no fee to authors for publication and includes a peer review system. Bolivian Journal of Chemistry is published both in print and in electronic formats (own website, SciELO, Scribd, Google Scholar, facebook and Redalyc).

The Bolivian Journal of Chemistry avails itself the right of refusing to publish any article that does not comply with the analytical criteria set by the referee committee; being the refusal of one sole referee enough motif for refusing the article.
